

# XiSecure SAP 3.4.0

## Release Notes

worldpay  
from FIS

## XiSecure for ECC

XiSecure SAP is the component used to integrate SAP to the B2B Secure and Intercept tokenization platforms. It also has conversion programs to perform mass tokenization of credit cards.

### New Features and Enhancements

#### Intercept SAP and Open AR CVV & Workflow Improvements

In Open AR, when CVV is enabled and you select “Other Card”, the CVV field is now available on the initial OAR dialog box and populates from the Intercept packet. Previously there was another pop-up requiring the user to enter the value again. This required modifications in Open AR in PCMA transport as well. See PCMA 2.9.0 Release Note for more details.

### Problems Addressed

N/A

### Compatibility and Basic Requirements

- SAP ECC 6.0, ABAP 702 Support Pack 0016 minimum
- Paymetric SAP components:
  - PAS - 2.10.0
  - PCMA – 2.9.0

### Install and Configuration Notes

#### New Installs

This is a full transport. There are no release-specific installation notes. Refer to the XiSecure-Intercept SAP S4HANA Integration Guide for install, setup, and integration details.

#### Upgrades

If you are on a version prior to the latest full transport, install the full one and all subsequent patch transports.

- If you are on a version later than the latest full transport, verify all patch transports between your version and the latest are installed before installing the latest.
- For ALL upgrades, even if PCMA IMG modifications are not required for the upgrade, you must execute the PCMA IMG transaction code (/n/PMPAY/PIMG) to initiate the objects from the upgrade.
- When importing the transport(s):
  - The '**overwrite existing objects**' flag should be selected since many of these are existing objects.

- Allow sufficient time for each transport to complete before loading the next one to prevent syntax errors.
- Any custom changes (including userexits configured in the PCMA IMGs) should be evaluated and may need to be replicated in the new later versions of these userexits. There may be new userexits that were not in your previous version - please review the documentation for details.
- If upgrading from a previous/older version of PCMA, it is advised you recreate any custom userexits that are configured in /PMPAY/PIMG. They should be recreated based on the new sample default userexits that are provided.
- As always, please test thoroughly before moving to PRD. If you would like to obtain consulting assistance with this install, please contact [Support Services](#).

## Objects Modified

This section identifies any objects modified that should be considered when upgrading if you have customizations as stated above under Upgrade section.

- N/A

## Supporting Integration Documents and Transports/Installers

- XiSecure-Intercept SAP S4 Integration Guide
- XiSecure\_SAP\_S4HANA2020-2021.zip

Document and transport are available for download from the Merchant Portal Resources page, or you can request from Support Services, Relationship Manager, or Project Consultant.
