XiSecure for ECC

XiSecure SAP is the component used to integrate SAP to the B2B Secure and Intercept tokenization platforms. It also has conversion programs to perform mass tokenization of credit cards.

New Features and Enhancements

CVA Assessment

Performance improvements made during CVA assessment.

Problems Addressed

N/A

Compatibility and Basic Requirements

- SAP ECC 6.0, ABAP 702 Support Pack 0016 minimum
- Paymetric SAP components:
    - PAS - 2.10.0
    - PCMA – 3.0.0

Install and Configuration Notes

New Installs

This is a full transport. There are no release-specific installation notes. Refer to the XiSecure-Intercept SAP ECC Integration Guide for install, setup, and integration details.

Upgrades

If you are on a version prior to the latest full transport, install the full one and all subsequent patch transports.

- For ALL upgrades, even if XiSecure IMG modifications are not required for the upgrade, you must execute the XiSecure IMG transaction code (/n/PMENC/BIMG) to initiate the objects from the upgrade.
- When importing the transport(s),
    - The **'overwrite existing objects'** flag should be selected since many of these are existing objects.
    - Allow sufficient time for each transport to complete before loading the next one to prevent syntax errors.
    - Any custom changes (including userexits configured in the Paymetric IMG's) should be evaluated and may need to be replicated in the new later versions of these userexits. There

may be new PUE's (Paymetric userexits) that were not in your previous version - please review the documentation for details.

- If upgrading from a previous/older version of XiSecure SAP IK, it is advised you recreate any custom userexits that are configured in the /PMENC/BIMG. They should be recreated based on the new sample default userexits that are provided.

- As always, please test thoroughly before moving to PRD. If you would like to obtain consulting assistance with this install, please contact Support Services.

Objects Modified

This section identifies any objects modified that should be considered when upgrading if you have customizations a stated above under Upgrade section.
