Prior Release Information

| Prior Release Features | |
|------------------------|---|
| Version | Description |
| 1.4.0 | N/A. There are no new features in this release. |
| 1.4.1 | N/A. There are no new features in this release. |
| 1.5.0 | N/A. There are no new features for this release. |
| 2.0.0 | Data Intercept (DI) for SAP Added To assist our customers with their PCI compliance efforts, Paymetric has added DI functionality in the XiSecure SAP Integration Kit completely removing any entry of credit card numbers in their SAP Systems. The functionality can be integrated via a conversion routine or F4 search help. DI for SAP allows the user to retrieve a token from... <ul style="list-style-type: none">• the Customer Master, |

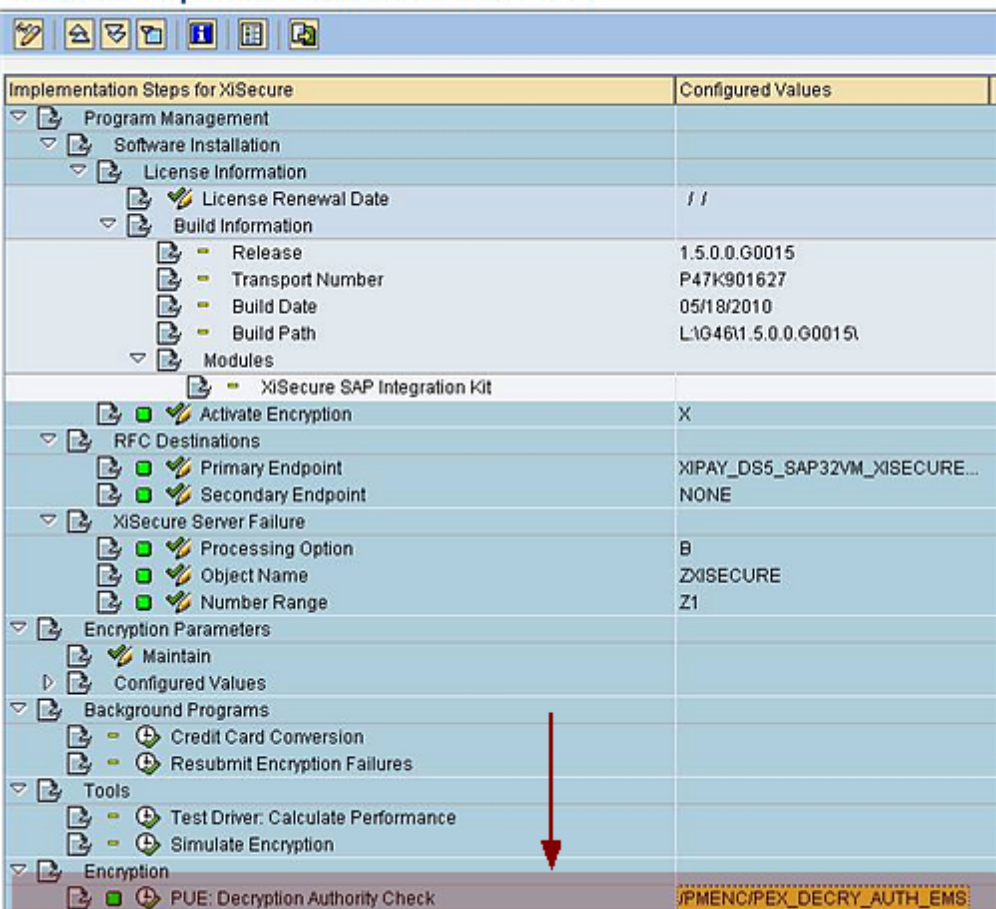

| Prior Release Features | |
|------------------------|--|
| Version | Description |
| | <ul style="list-style-type: none"> the DI Web GUI (aka DI Standalone URL) and copy it into the credit card number field with a simple click, a local or network file containing a single token saved from the DI Web GUI or a file that contains multiple, commonly-used tokens for easy reference. <p>Refer to the product documentation for details on integrating and using DI for SAP.</p> |

| Prior Release Issues Addressed | |
|--------------------------------|---|
| Version | Description |
| 1.4.0 | <p>Decryption User Exit Issue</p> <p>Associated Tickets: FP-PM 903</p> <p>Modifications were made to ensure the decrypt user exit is called correctly from various functional modules.</p> <p>Invalid Token Message Spamming Application Event logs</p> <p>Associated Tickets: FP-Dev 52</p> <p>Decryption calls were being made with a blank token causing a message on the application event log but no impact to the transaction processing. Validation has been added to check the format and only make the decrypt call if it is in the correct token format; thereby, eliminating the message in the application event log.</p> <p>Short Dump /PMENC/PSAMPLE</p> <p>Associated Tickets: FP-Dev 26</p> <p>Modifications were made to eliminate a short dump when viewing data in the / PMENC/PSAMPLE table.</p> <p>Objects Modified</p> <p>The following objects were modified in this release:</p> <ul style="list-style-type: none"> Function Module /PMENC/P_CONVERT_VALUE Table /PMENC/PSAMPLE |
| 1.4.1 | <p>Decryption User Exit Issue</p> |

| Prior Release Issues Addressed | |
|--------------------------------|---|
| Version | Description |
| | <p>Associated Tickets: FP-DEV 3</p> <p>The authorization check requiring the /PMENC/FAILURES program to be run from the XiSEcure menu has been disabled to allow the program to be run as a background job.</p> <p>Decryption User Exit Issue</p> <p>Associated Tickets: FP-PM 903</p> <p>Modifications were made to ensure the decrypt user exit is called correctly from various functional modules.</p> <p>Object(s) Modified</p> <p>The following objects were modified in this release:</p> <ul style="list-style-type: none">• Program /PMENC/FAILURES• Function Module /PMENC/P_CONVERT_VALUE |
| 1.5.0 | <p>Decryption Authority Check PUE Missing from IMG</p> <p>Associated Ticket: FP Dev-292</p> <p>Added a new user exit, to the XiSecure IMG. The decryption authority check PUE does a decryption authority check in XiSecure for tokenization (this was previously done in the PCMA IMG).</p> |

Prior Release Issues Addressed

| Version | Description |
|---------|---|
| | <p>XiSecure Implementation Guide - Maintain</p>  <p>Error: Web Service Not Responding</p> <p>Associated Ticket: FP Dev-223</p> <p>A change was made to the conversion routine to remove gaps from the credit card number number. This took care of any issue when a card is entered with gaps (such as 4444 3333 2222 1111) allowing it to properly encrypt.</p> |
| 2.0.0 | N/A. This release is for new functionality only. |
